第52回日本人工関節学会 ランチョンセミナー1

1-1-LS1-01

How can we improve outcomes in arthroplasty?

The best possible outcome for the patient is the main goal for every surgeon in arthroplasty. But how can we achieve this?

An internationally renowned faculty will take a deeper look at existing evidence and clinical practice.

The reduction of complications like periprosthetic fractures or periprosthetic joint infections should undoubtedly be the goal in arthroplasty to provide sustainable solutions for the patients. Let's discuss how cemented fixation and the use of local antibiotics can help to prevent these complications.

And which specific patient groups in particular do benefit from cemented arthroplasty.

Dr. Martin Thaler, AUSTLIA

Associate Professor of Orthopedics Medical University Innsbruck, Department of Orthopedic Surgery

[Job History and Project Leadership]

- •GCP(Good Clinical Practice)Royal College of Physicians of the UK
- Start Finance School(MBA) Middl esex University London
- Head Certified Arthroplasty Center Innsbruck

[Invited presentations and faculty of following Societies]
AE, AO, EFFORT, SIOT, EHS, HAOST, Mayo Arthroplasty Conference, ŌGU
